

# Kokoda Challenge

The technology and systems behind the Kokoda Challenge event.

Visual Spectator (Google Earth) with detailed team information

Real time web based team results and times

## Competitor RFID Tags

Each competitor will be issued with a unique RFID (Radio Frequency Identification) tag. RFID tags will be issued during registration on the morning of the event. It is important you have the correct tag.

## Checkpoint RFID Scanners and Laptops

Each checkpoint will have at least one RFID scanner and one laptop computer with a wireless internet connection. To check-in, place your RFID tag within 5cm of the RFID scanner. You will hear a beep and your name will appear on the laptop computer screen.

## Visual Spectator

Visual Spectator has been developed using Google Earth to display the approximate location of each team in real time. You can access Visual Spectator during the event from the Kokoda Challenge website ([www.kokodachallenge.com](http://www.kokodachallenge.com)).

## Web Based Results

Results by team category are available in real time including split times (the time each team reached a particular checkpoint). You can access web based results during and after the event from the Kokoda Challenge website ([www.kokodachallenge.com](http://www.kokodachallenge.com)).

## SMS Messages

Once each competitor crosses the finish line, they will receive a personalised sms message on their mobile phone with their official time. This sms service can also be used to notify competitors of important messages during the event.

## About KMLTracks

KMLTracks has been volunteering with the Kokoda Challenge association for the past three years to develop an unique integrated system to manage the event. KMLTracks would appreciate the opportunity to assist your business with a customised systems or integrating your existing systems.
